

Nurtilek Assankhan

Senior Backend Engineer · Go · Fintech & High-Load Systems

nurtilek.assankhan@gmail.com +7 (777) 561-8308 t.me/nurtilek_assankhan github.com/nurtidev Astana, Kazakhstan

SUMMARY

Backend engineer with 4+ years building high-load microservices in Go across fintech, smart-city, and crypto-trading. Key results: 3.75× latency reduction, 4–5× analytics throughput gain, 35% duplicate transaction elimination. Winner, Astana Hub Demo Day 2026 (HSE AI Dashboard for KMG-Kumkol, $R^2=0.796$, ~197M KZT/year projected savings).

EXPERIENCE

eMoney.ge

Jul 2024 – Mar 2026 · Remote

Senior Golang Backend Developer · Fintech / Digital Payments

- Designed idempotent RESTful payment APIs in Go, reducing duplicate transactions by ~35% through retry logic and request deduplication.
- Optimized MySQL queries and migration schemas, cutting critical endpoint response time from ~450 ms to ~120 ms (3.75× improvement).
- Integrated async Kafka pipelines for external provider reconciliation, improving fault tolerance and eliminating synchronous coupling.
- Built Prometheus + Grafana observability stack; maintained production SLA on-call for payment-critical services.

Sergek Technologies

Nov 2023 – Jul 2024 · Astana

Golang Developer · Smart City / Traffic Monitoring

- Built city traffic monitoring platform processing 200K+ events/day; designed REST API layer consumed by municipal services.
- Migrated event analytics from PostgreSQL to ClickHouse, achieving 4–5× query speed improvement for aggregation workloads.
- Implemented gRPC anti-fraud module with Vue.js admin panel; refactored messaging layer, reducing avg service response time by ~40%.

Astana IT University

Sep 2023 – Nov 2025 · Part-time

R&D Engineer · IoT / Anomaly Detection

- Architected real-time anomaly detection backend for Kazakhstan dam infrastructure: IoT telemetry ingestion, storage, and alerting at MTTD < 10 min.
- Trained and deployed YOLO-based CV pipeline for satellite imagery object recognition, reducing manual verification time by 60%.

Darwin Tech Labs

Sep 2021 – Oct 2023 · Remote

Golang Developer · Crypto Trading Platform

- Developed order execution, balance management, and trade history microservices for a high-frequency crypto trading platform.
- Integrated crypto wallet transaction signing and reconciliation; optimized PostgreSQL with partitioning and compound indexing for high-write tables.
- Introduced Kafka for cross-service event streaming; achieved 80%+ test coverage (testify) and configured GitLab CI/CD test gates.

EDUCATION

M.S. Information Security

L.N. Gumilyov ENU, Astana · 2026

B.S. Computer Science & Software Engineering

L.N. Gumilyov ENU, Astana · 2022

Software Developer Certificate

Alem School · 2022

TECHNICAL SKILLS

Languages	Go, Python, SQL
Databases	PostgreSQL, MySQL, ClickHouse, Redis
Messaging	Apache Kafka, RabbitMQ
APIs	REST, gRPC
Infra	Docker, Kubernetes, GitLab CI/CD
Observability	Prometheus, Grafana, Zap
Languages	Russian C2, English B2, Kazakh native
