Summary

Go backend engineer with 5 years of commercial experience. I've built payment systems, urban traffic monitoring and a trading platform; today I'm building a lending platform and a digital portal in the public sector. I'm drawn to work where reliability matters more than speed: money, government-registry integrations, processes that must never break halfway. In 2026 I won Astana Hub Demo Day with an AI forecasting platform for an oil-production company.

Experience

Agrarian Credit Corporation *May 2026 – Present · Astana*

Senior Golang Developer · Fintech / GovTech · Lending

- Go backend for a lending platform: Clean Architecture and DDD, long-running processes on Temporal with versioned workflows.
- Integrations with state registries and the credit bureau over a bus: idempotency, timeouts, resilience to upstream failures.
- Digital portal: public website, borrower cabinet and admin panel in Next.js, Go backend; migrated the legacy corporate website.
- Kafka + transactional outbox, PostgreSQL; Kubernetes delivery via GitOps (ArgoCD), in production since September 2026.

eMoney.ge *Jul 2024 – Mar 2026 · Remote*

Senior Golang Backend Developer · Fintech / Digital Payments

- Designed idempotent RESTful payment APIs in Go, reducing duplicate transactions by ~35% through retry logic and request deduplication.
- Optimized MySQL queries and migration schemas, cutting critical endpoint response time from ~450 ms to ~120 ms (3.75× improvement).
- Integrated async Kafka pipelines for external provider reconciliation, improving fault tolerance and eliminating synchronous coupling.
- Built Prometheus + Grafana observability stack; maintained production SLA on-call for payment-critical services.

Sergek Technologies *Nov 2023 – Jul 2024 · Astana*

Golang Developer · Smart City / Traffic Monitoring

- Built a city traffic monitoring platform processing 200K+ events/day; designed the REST API layer consumed by municipal services.
- Migrated event analytics from PostgreSQL to ClickHouse, achieving 4–5× query speed improvement for aggregation workloads.
- Implemented a gRPC anti-fraud module with a Vue.js admin panel; refactored the messaging layer, reducing avg response time by ~40%.

Astana IT University *Sep 2023 – Nov 2025 · Part-time*

R&D Engineer · IoT / Anomaly Detection

- Architected a real-time anomaly detection backend for Kazakhstan dam infrastructure: IoT telemetry ingestion, storage, and alerting at MTTD < 10 min.
- Trained and deployed a YOLO-based CV pipeline for satellite imagery object recognition, reducing manual verification time by 60%.

Darwin Tech Labs *Sep 2021 – Oct 2023 · Remote*

Golang Developer · Crypto Trading Platform

- Developed order execution, balance management, and trade history microservices for a high-frequency crypto trading platform.
- Integrated crypto wallet transaction signing and reconciliation; optimized PostgreSQL with partitioning and compound indexing for high-write tables.
- Introduced Kafka for cross-service event streaming; achieved 80%+ test coverage (testify) and configured GitLab CI/CD test gates.

Education

M.S. Information Security
L.N. Gumilyov ENU, Astana · 2026

B.S. Computer Science & Software Engineering
L.N. Gumilyov ENU, Astana · 2022

Software Developer Certificate
Alem School · 2022

Technical skills

Languages	Go, Python, SQL
Databases	PostgreSQL, MySQL, ClickHouse, Redis
Messaging & workflows	Apache Kafka, RabbitMQ, Temporal
APIs	REST, gRPC
Infrastructure	Docker, Kubernetes, GitLab CI/CD, ArgoCD
Observability	Prometheus, Grafana, Zap
Spoken	Russian C2, English B2, Kazakh native
